## REVIT ARCHITECTURE

### COURSE OBJECTIVE

To enhance the knowledge of students in REVIT ARCHITECTURE software

### ABOUT THE SOFTWARE

Autodesk **Revit** is Building Information Modeling (BIM) software for Microsoft Windows, which allows the user to design with parametric modeling and drafting elements. The base building is drawn using 3D objects to create walls, floors, roofs, **structure**, windows, doors and other objects as needed. **Autodesk Revit** is a building information modelling software for architects, landscape architects, structural engineers, mechanical, electrical, and plumbing (MEP) engineers, designers and contractors. The original software was developed by Charles River Software, founded in 1997, renamed Revit Technology Corporation in 2000, and acquired by Autodesk in 2002. The software allows users to design a building and structure and its components in 3D, annotate the model with 2D drafting elements, and access building information from the building model's database. Revit is 4D building information modeling capable with tools to plan and track various stages in the building's lifecycle, from concept to construction and later maintenance and/or demolition.
