Why Should You Do Systematic Literature Review

- To explain why your research needs to be carried out
- To choose certain methodologies or theories to work with
- To show how your work adds to the research already carried out

Your aim should be to evaluate and show relationships between the work already done (Is Researcher Y's theory more convincing than Researcher X's? Did Researcher X build on the work of Researcher Y?) and between this work and your own

The idea of the literature review is not to provide a summary of all the published work that relates to your research, but a survey of the most relevant and significant work

Literature review is **NOT** to just tell your reader what other researchers have done

Group similar information and show the relationship between the work of different researchers

Literature review gives credit to our predecessors and justifies the need and novelty of the article's contribution

TIP - A Pert chart alone is not enough. Should be used

**Invited Lecture given by Dr.R.Seyezhai, Associate Professor/EEE, SSN College of
