REPORT ON THE TWO - DAYS NATIONAL LEVEL WEBINAR ON “FROM STRUCTURE TO FUNCTION VIA ALGORITHMS AND SIMULATIONS”

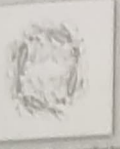

The department of Physics, Kongu Engineering College organized TWO - DAYS NATIONAL LEVEL WEBINAR ON “FROM STRUCTURE TO FUNCTION VIA ALGORITHMS AND SIMULATIONS” on 22 & 23 of September 2021. The programme was organized virtually on google meet platform from 4.00 p.m to 5.30 p.m. A total of 41 participants from various institutions participated and benefitted out of this programme.

The resource person of this webinar is Dr.Rajeshwari Gangadharan, Professor, Ethiraj College for Women, Chennai. The talk of the first session explains about X-ray diffraction with data collection for a crystalline material and its theory behind the method. Also the crystal structure refinement procedure is clearly explained with the required software. Second day session focuses on importance of protein structure and docking study with the help of GOLD software for drug designing. On the whole the two day webinar gives a clear idea about how to extract functional information of macromolecules i.e protein from its structural information.

The end of the session clarifies the queries of the participants. Dr.T.Deepa Rani and Ms.C.Karthika was the Convener of the programme. Earlier Dr.T.Deepa Rani, Assistant Professor (Sr.G) welcomed the gathering and Ms.C.Karthika, Assistant Professor proposed vote of thanks.

Major Features of Nature Culture

1. Harvesting the sunlight
2. Recycling Processes
3. Establishing energy pool and energy chain as food chains

Dry weight of plants

Weight of fresh biomass "fresh weight" → Keep losing weight till constant weight is achieved. → Weight that remains constant after drying is "dry weight"

This is the weight that remains constant after drying in sunlight i.e. If we were to consider fresh biomass, the weight of the same is called "fresh weight". Allow it to dry under sun, weigh it on alternate days. In a span of five to seven days when no loss of weight is observed, that is the "dry weight". ("Dry weight" includes some quantity of water called "constitutional water" which is equivalent to 60 % of the dry weight.)
